Reference Guides for Artificial Intelligence

Use these guides to enhance your organization's capabilities in leveraging AI.

 AI strategy	 AI value	 AI organization	 AI people & culture	 AI governance	 AI engineering	 AI data
The alignment and sophistication of the organization's AI vision and objectives	The systematic identification, prioritization and management of AI initiatives	The integration and collaboration within the AI ecosystems, including internal teams and external partnerships	The organization's commitment to fostering AI literacy, AI skills and a culture of innovation	The establishment and enforcement of governance policies and standards to ensure ethical and compliant AI practices	The robustness and efficacy of AI development and deployment processes	The quality, accessibility and utilization of data for AI applications

AI Strategy is the comprehensive plan and vision that guides an organization's AI initiatives. It is about establishing a clear, adaptive, and business-focused framework that guides AI initiatives, ensuring they are strategically aligned and contribute to the organization's overall success and leadership in the industry.

How to Use This Reference Guide

This reference guide includes Gartner's most current perspectives and frameworks to help CIOs adopt and scale AI-related capabilities.

CIOs and other digital leaders (including CAIOs, CDOs and CTOs involved in enterprise-wide AI strategy and deployment) should use this reference guide to accelerate their organization's AI journey.

- This reference guide provides high-level guidance on three critical areas of AI strategy adoption for the enterprise: Strategize, Plan and Execute. Within these three areas, this reference guide covers the critical tasks necessary to achieve lasting success with AI initiatives.

Within the Reference Guide:

- This reference guide contains a high-level view of the key components that are necessary to achieve lasting success when implementing an AI organization. Select the component that is most relevant to your organization and refer to the relevant objectives, key actions and recommended highlights in the tables.
- You will find customizable templates through the links in the tables that you can use to work through the various components along the AI implementation journey.
- You can leverage the notes in each slide to get guidance on how and when to use the template/framework in your AI implementation journey. Access to links may be dependent on your Gartner membership. Please reach out to your sales and service delivery point of contact for further information.

You are welcome to request that a Gartner analyst help you with a particular topic or area. Please contact your Gartner account team to schedule a conversation.

AI Strategy - Introduction

Why Do You Need a Clear AI Strategy?

Why do you need a well-defined AI strategy?

- Provide clear direction on which AI investment opportunities to pursue
- Understand how to navigate business changes to leverage AI for your organization
- Eliminate conflict, duplication and indecision in implementing AI initiatives
- Overcome any other challenges related to realizing AI ambition and scaling AI in the organization

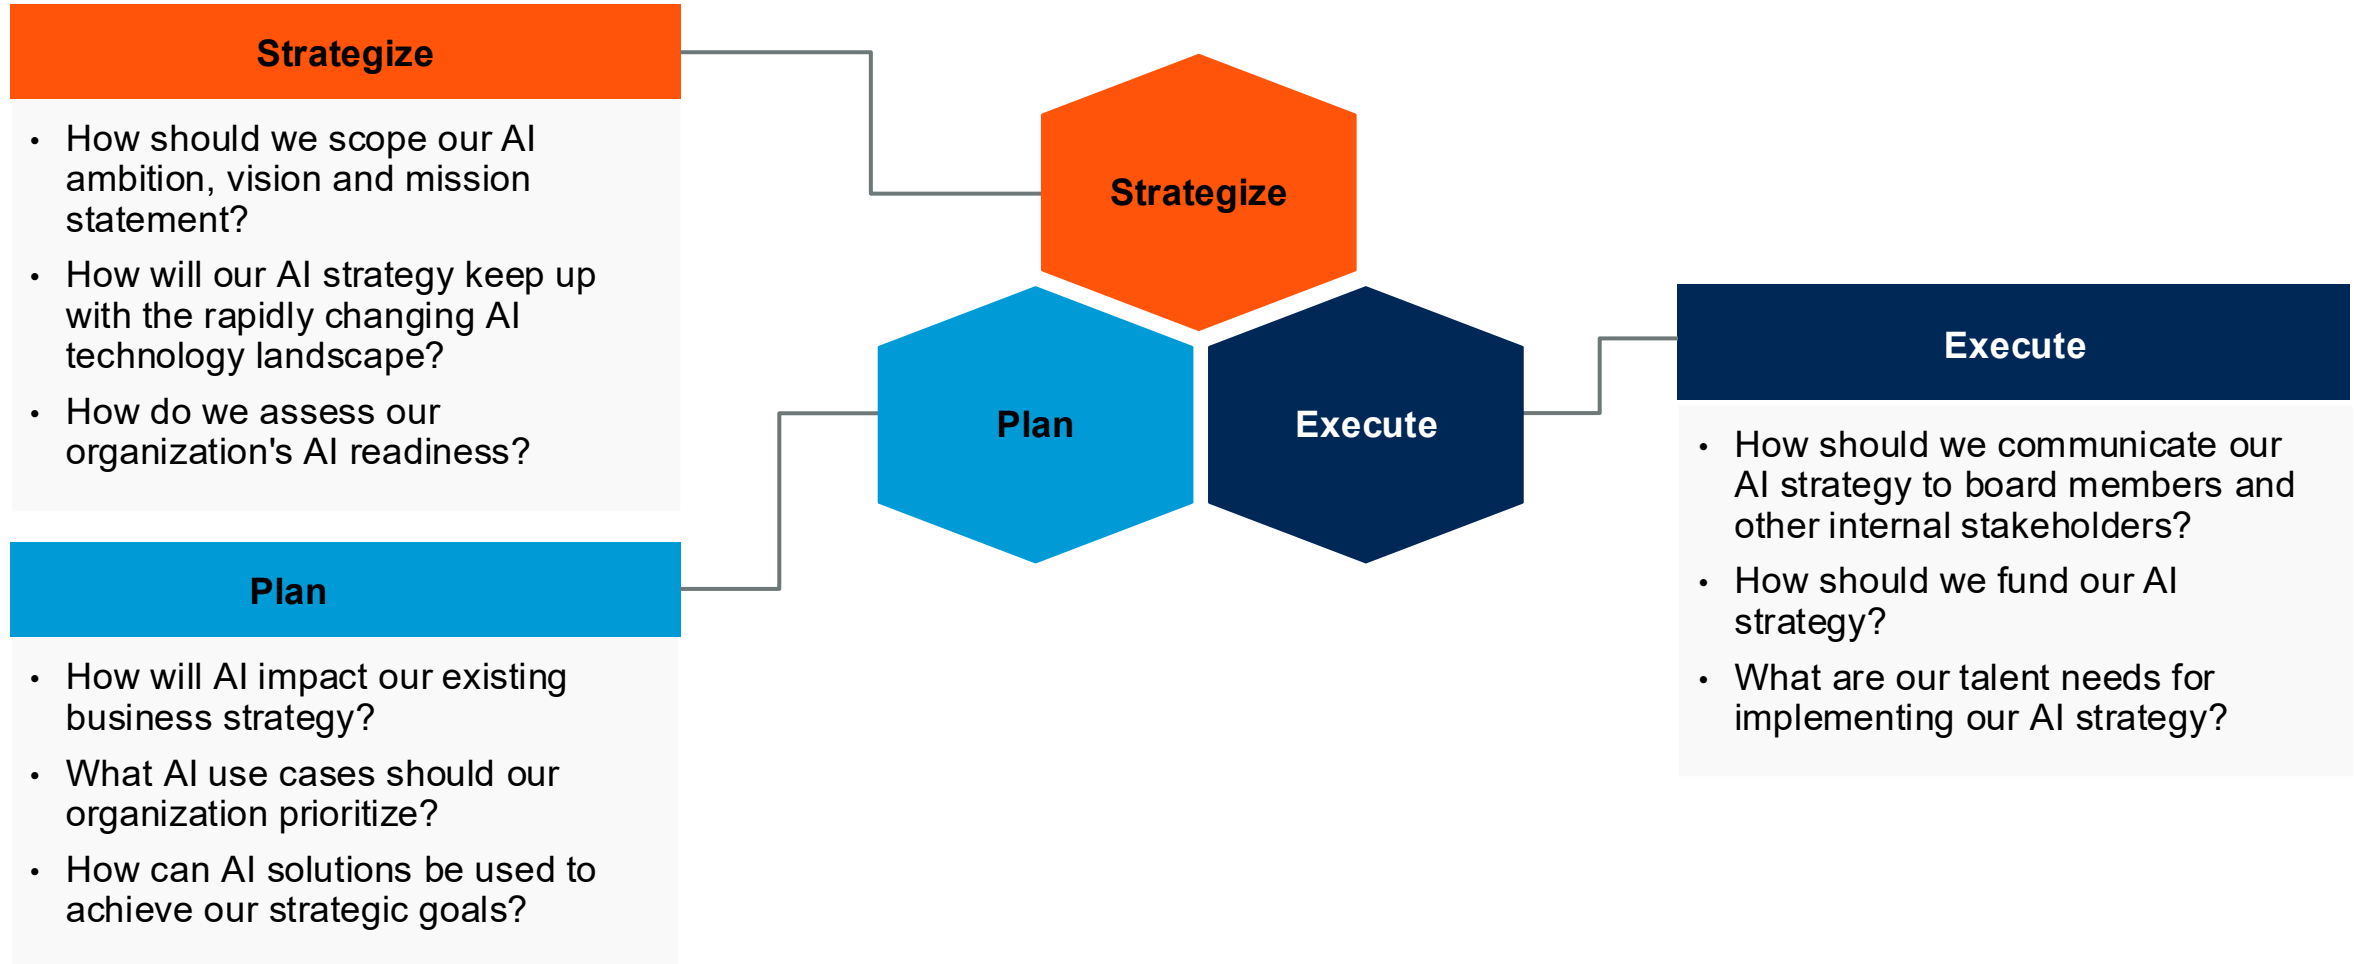

Why do you need a clear AI strategy now?

- AI strategies are currently meant to be an urgent response to industry disruption caused by AI
- Only, 19% of AI leaders surveyed by Gartner have an AI strategy that is completely embedded into their organization's business strategy*
- AI strategies are initially separate from existing IT or digital strategies, but ultimately become embedded in them as the organization matures
- 41% of AI leaders surveyed by Gartner do not have an AI strategy with widespread participation in their organization*

Key Components of AI Strategy

CIO Top 10 Focus Areas

RESTRICTED

AI Strategy Components: Objectives, Key Actions and Highlights

Strategize

Components	Objectives	Key Actions	Reference Guide Highlight
AI Ambition	Document how AI will support your business strategy in a vision statement.	• Establish a long-term AI vision aligned with the organization's business goals, needs and challenges. • Ensure that the vision is actionable and relatable across every role within your organization. • Decide on the relative allocation of AI effort between everyday AI and game-changing AI, as well as the use of AI between external customers and internal operations. • Validate and calibrate this vision statement in a discussion with senior leadership.	• AI Ambition Opportunity Radar • 3 Types of AI Ambition • ON DEMAND WEBINAR Client Webinar: AI Economics: Cost, Risk and Value for 2025
Organizational Readiness	Measure and identify your organization's AI maturity and readiness level.	• Assess the skills, technology, organization and legal capabilities your organization has for AI adoption to determine the readiness and maturity of the organization. • Define the framework to measure the organization's AI maturity in a systematic way. • Run a baseline assessment to identify gaps between current and target maturity.	• AI Readiness Assessment for Capabilities

Strategize (Continued)

Components	Objectives	Key Actions	Reference Guide Highlight
Technology and Regulatory Trends	- Research ongoing developments and innovation in AI business models and technology. - Identify existing AI policies and regulations that could impact your organization's AI ambition, competitive advantage and overall business strategy.	- Establish processes and mechanisms for monitoring market and industry trends regarding the use of AI (e.g., use cases, case studies). Assign the task of carrying out AI-related policy and regulatory research to a dedicated team of employees. - Identify and analyze impact of key trends on the organization. - Summarize the key trends and their potential impact in a short report. - Set up a process that triggers a revision to the strategy when technology/industry trends change significantly or the business strategy shifts. This can include a periodic annual refresh independent of changes. - Research AI-related policies and regulations of the geographic regions where your organization operates. - St a plan to continuously monitor changes in AI-related policies and regulations that could impact your organization.	Emerging Tech Disruptors: Top 5 Disruptive Trends in Artificial Intelligence for 2025 Seize the Opportunities: How Will U.S. Policy on AI Impact Business Strategy? Global Trends in AI Policies and Regulations

Plan

Components	Objectives	Key Actions	Reference Guide Highlight
Deployment Roadmap	Establish roadmap for implementing AI and getting value for your organization.	• Develop a high-level roadmap for deploying AI with short-term and long-term adoption goals. • Present AI roadmap to the executive/board to gain approval and funding. • Align and periodically realign the adoption planning goals for the maturing capabilities of the organization. • Define a plan to periodically update the roadmap, including the analysis required (e.g., external trend analysis, maturity assessment).	• AI Portfolio: How to Vet, Prioritize and Fund AI Use Cases • Business Value Drivers for Agentic AI
Goals and Metrics	Identify measurable goals and metrics to evaluate progress towards realizing your organization's AI strategy.	• Set measurable strategic objectives for AI. • Identify metrics/KPIs based on executive priorities to measure the success of the AI strategy. • Set up process to monitor these metrics. • Schedule periodic meetings to report progress of AI strategy based on these metrics to executives.	• How to Calculate Business Value and Cost for Generative AI Use Cases • Ten AI Value Metrics for Cost Reduction, Revenue Growth and Productivity

Plan (Continued)

Components	Objectives	Key Actions	Reference Guide Highlight
Use Case Prioritization	Identify and populate the portfolio of AI use cases your organization should pursue to support overall business strategy.	- Identify the business areas with the most important opportunities to create value with AI. - Identify specific strategic AI initiatives to be pursued. - Validate these value priorities with senior leadership.	AI Portfolio: How to Vet, Prioritize and Fund AI Use Cases AI Use-Case Comparison for Supply Chain (Example)
Business Case	Develop a business case demonstrating the value of select AI use cases to your organization’s business strategy.	- Carry out a cost-benefit analysis to determine the potential return-on-investment of AI use case portfolio. - Identify and articulate which business goals the AI use case portfolio supports. - Convey the value proposition of the AI use case portfolio to senior leadership.	How to Calculate Business Value and Cost for Generative AI Use Cases AI and GenAI Cost Calculator The 3 Business Cases of Generative AI Value
Risk Management	Determine your organization’s AI-related risk tolerance to determine the viability of your AI strategy.	- Identify the key risks for the implementation of AI in the organization. - Carry out scenario analyses to assess the potential short-term and long-term impacts of specific AI solutions on your organization’s business performance.	Risk Mitigation Steps Top GenAI Usage Risks Tool

Components	Objectives	Key Actions	Reference Guide Highlight
AI Talent	Leverage existing and acquire necessary additional talent and personnel for realizing your AI strategy.	- Identify which teams/team members can carry out AI adoption in the organization. - Assemble a team dedicated to developing, governing and executing AI implementation. - Determine whether teams dedicated to AI adoption are permanent or temporary.	AI Team Roles Phased AI Team Development
Organizational Change Management	Prepare for potential changes to your organization due to AI implementation.	- Build a communication plan documenting the goal, frequency and channels for conveying AI strategy to internal and external stakeholders. - Identify job roles that need to be re-scoped due to AI adoption and carry out workforce trainings, as needed. - Prepare for changes to organizational structure due to AI adoption and integration. - Implement an AI literacy program to train and upskill current employees on how to use AI solutions. - Set a plan to address cultural barriers to and impacts of AI adoption.	What Makes AI Change Management Different?
AI Governance	Determine your organization's policies and leadership responsibilities for governing AI in your organization.	- Create and define components of an AI governance operating model. - Create, maintain and enforce AI governance policies and controls. - Design, develop, integrate, test and deploy governance oversight systems. - Develop centers of excellence to steward AI adoption.	AI Governance Framework AI Trust, Risk and Security Management (TRiSM) Functions Dimensions of AI Governance
Fast Cycle Innovation	Foster a culture of innovation around AI.	- Systematically identify, evaluate, manage and nurture innovative ideas from across the organization, ensuring the most promising concepts are developed and scaled effectively. - Incentivize Communities of Practice to facilitate AI knowledge-sharing and learning.	Communities of Practice

Execute (Continued)

Components	Objectives	Key Actions	Reference Guide Highlight
Vendor and Technology Partnerships	Systematically identify cost-efficient product and service providers to implement AI solutions in your organization.	- Identify current strategic partners that can provide capabilities needed for AI adoption. - Curate a list of vetted vendors and technology providers that meet set parameters. - Vet and select vendors by issuing Request-for-Proposals.	Build-Buy Decision Framework Vendor Identification for Generative AI Technologies Tool
Technology Architecture and Capabilities	Leverage existing and acquire necessary additional resources and capabilities to realize your organization's AI strategy.	- Identify priority capability gaps for being able to achieve the AI ambition. - Use capability gaps assessment to identify needed platforms, technology and equipment for implementing AI solutions.	Categorization Framework of Market-Available AI Technologies and Example Vendor Tooling Market Map for GenAI D&A Centric View of AI Architecture
AI Budget and Funding	Determine the budget necessary for realizing your AI ambition and assign AI investment decision rights.	- Scope the budget needed to procure and maintain new and existing capabilities. - Outline decision rights for AI investment (e.g., centralized/decentralized/hybrid funding model).	Toolkit: How to Create an Enterprise Generative AI Budget for 2025
AI-Ready Data	Prepare data and data management systems for AI implementation.	- Assess data readiness for initial AI use cases. - Implement a data governance system for AI data. - Acquire and prepare high-value data for implementing AI. - Set up data architecture platforms and a metadata management framework for AI. - Set up DataOps and data pipeline monitoring, including the use of observability metrics to track timely delivery of data, accuracy of the data or cost of operations. This also involves data drift monitoring.	CIO Guide to AI-Ready Data Requirements for AI-Ready Data Data Management Must Expand to Meet AI Needs

Reference Guide Highlight — Deployment Roadmap

AI Roadmap at a Glance

Use the roadmap as a guide for selecting which activities to prioritize for your organization’s AI strategy.

AI Roadmap at a Glance					
	← Initial activities			Advanced activities →	
 AI strategy	Define the AI vision	Analyze external trends	Communicate the AI strategy	Identify priorities for AI portfolio	
	Measure AI maturity	Initiate the AI strategy	Set adoption goals for AI roadmap	Measure AI strategy success	Establish process to refine AI strategy
 AI value	Prioritize initial AI use cases	Run initial AI pilots	Establish process to prioritize AI portfolio	Implement AI FinOps practices	Setup AI value monitoring system
	Define value for initial AI use cases	Track value of initial use cases	Introduce product management practices	Launch an initial AI product	Establish an AI product portfolio
 AI organization	Create an AI resourcing plan	Appoint an AI leader	Establish AI target operating model		
	Set up an AI community of practice	Set up an initial AI team/center of excellence	Form initial external AI partnerships	Set up process to manage AI partnerships	
 AI people & culture	Create an initial AI workforce plan	Create an AI change management plan	Set up process to evaluate AI workforce impact	Define business champions to drive AI literacy	
	Set up process for review of roles and job redesign	Create initial AI awareness campaigns	Launch an AI literacy program	Set up monitoring of employee readiness for AI	
 AI governance	Identify top AI risks and mitigation	Establish AI ethical principles	Set enforcement processes	Set up cross-functional AI governance board	Use AI literacy programs for AI governance
	Define initial AI policies	Gain buy-in for AI governance approach	Define decision rights for AI	Define target governance AI operating model	Pilot AI governance tooling
 AI engineering	Establish build vs. buy framework	Set up a sandbox environment	Define AI reference architecture	Establish MLOps/ModelOps practice	Design and embed AI UI/UX best practices
	Select vendors for initial AI use cases	Develop a library of design patterns	Create an AI vendor and application strategy	Set up an AI observability system	Stand up AI platform engineering
 AI data	Assess data readiness for initial AI use cases	Build data analytics for AI	Extend data governance to support AI	Establish an AI data quality framework	
	Implement data readiness plan	Gain buy-in to evolve data capabilities for AI	Evolve data capabilities for AI	Adapt metadata Practices for AI	Implement data observability for AI

Use the following accompanying tools with the AI Roadmap:

- A [PowerPoint file](#) with illustrative roadmaps and sequencing, which can be customized for your own organization.
- An [Excel file](#), providing more detailed activities to help develop your roadmap with more concrete timelines and assigned responsibilities.

Source: [Toolkit: Build Your Organization’s AI Roadmap](#)

Create a Business Strategy Infused With AI, Not a Disconnected AI Strategy

Prioritize AI investments across each element of business model (outer ring) by determining:

1. Is this a key priority for us now?
2. Can AI make a large improvement here?
3. What are table stakes and what will be disruptive?
4. Are we vulnerable here to competitors and disruptors using AI?
5. Where are we vulnerable? What are our competitive moats?
6. How can we leverage our unique data to create a competitive moat?

The impact determines the size of opportunities and threats due to AI and the urgency of action.

Measure IT’s Impact on Business Outcomes

Illustrative

Product Portfolio	Product Development	Product Quality	Product Price	New Customer Acquisition	Customer Loyalty	Production and Service Acceleration	Upsell/Cross-sell	Sales Volume
Sales Volume: Metrics to Consider								
Business Outcome-Driven Metrics				Technology Outcome-Driven Metrics				
• Total units sold • Revenue growth rate • Market share increase • Geographic expansion success • Sales efficiency ratio • Customer base growth • Product line performance • Seasonal sales fluctuations • Sales conversion rate • Customer acquisition rate				• E-commerce platform sales data • Accuracy of Digital Marketing Campaign Analytics in Predicting Sales Trends • Efficiency of Social Media Platforms in Driving Product Sales • Website traffic and user behaviour analysis • Data-Driven Effectiveness of CRM in Managing Sales Pipelines • Inventory Management System's Predictive Accuracy for Stock Replenishment • Point of sale system data analytics • Mobile sales application performance • Online customer reviews and feedback analysis • Success Rate of Email Campaigns in Driving Sales Inquiries				

Sources: [Example KPIs and Metrics to Measure IT’s Impact on Business Outcomes](#)

Measure IT’s Impact on Business Outcomes

Illustrative

Portfolio Rationalization	Vendor Management Procurement	Product Quality	Resource Model	Spans and Layers	Operating Structure	Optimize Assets	Digitization	Process Improvement
---------------------------	-------------------------------	-----------------	----------------	------------------	---------------------	-----------------	--------------	---------------------

Process Improvement: Metrics to Consider

Business Outcome-Driven Metrics	Technology Outcome-Driven Metrics
• Cycle Time • Turnaround Time • Throughput • Cost Effectiveness • Quality Rate • Capacity • Competitiveness • Process Efficiency Improvement • Reduction in Process-Related Errors • Increase in Customer Satisfaction Due to Process Improvements • Reduction in Time to Resolve Customer Issues • Cost Per Transaction Improvement • Process Standardization Across the Organization • Employee Satisfaction with Process Changes • Reduction in Waste and Redundancies • Improvement in Supply Chain Velocity • Compliance Rate with Process Standards	• Usage of Process Mapping Tools • Implementation of Continuous Improvement Software • Adoption Rates of Standard Operating Procedures (SOPs) Digitalization • Effectiveness of Quality Management Systems • Usage Rate of Performance Monitoring Tools • Time Reduction in Data Collection and Reporting • Employee Training Hours on New Processes • Analytics for Process Bottleneck Identification • Integration Degree of Process Management Software • Automation Level in Key Process Areas

Sources: [Example KPIs and Metrics to Measure IT’s Impact on Business Outcomes](#)

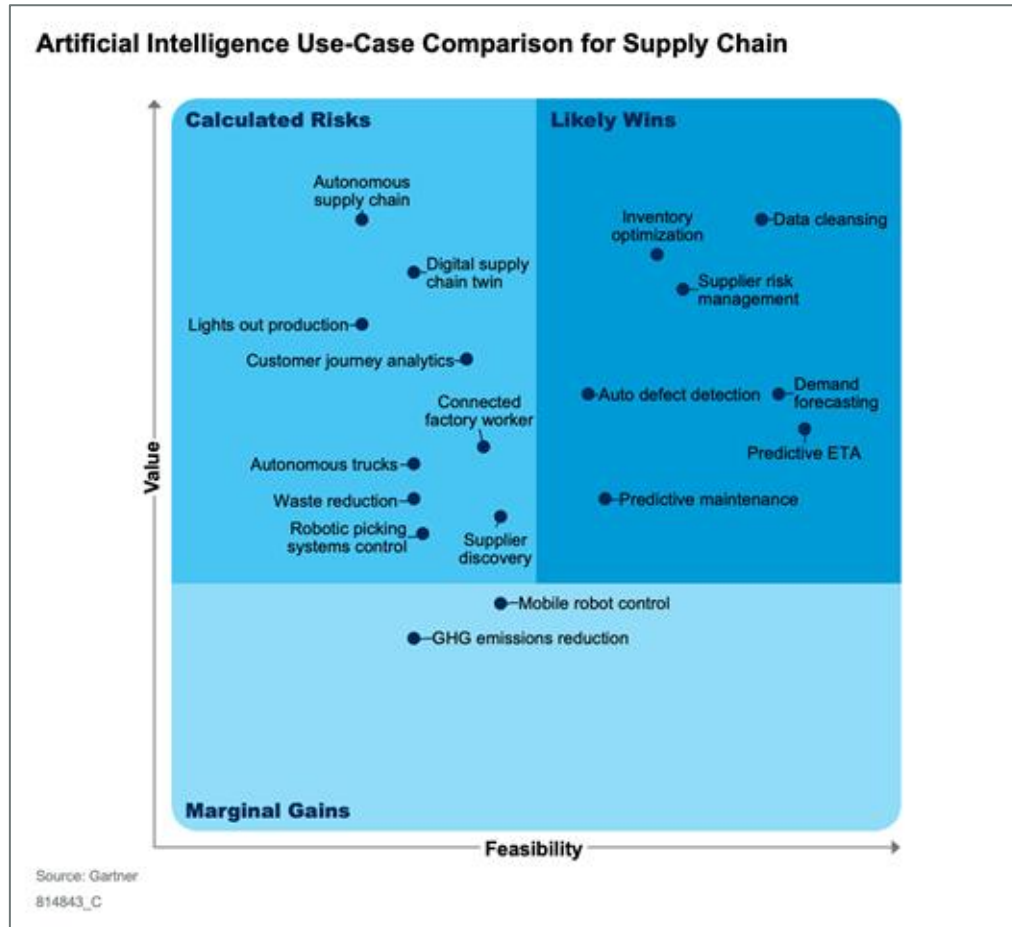

Prioritize by Value, Cost, Complexity and Strategic Alignment

Portfolio options	Approach to execution and management	Benefits/results
Defend Profile: competitive parity Optimization/productivity Incrementalism marginal gains and micro-innovations.	Manage like a cost center .	ROI is highly correlated to execution . Value will come with strong execution. If you execute well, organization will be highly likely to recognize the benefits.
Extend Profile: competitive advantage Growth in either market size, reach, revenue or profitability.	Manage like a profit center .	ROI is not solely dependent on execution. Profiling the process and data is critical success factor. Value is premised on analysis and alignment to competitive advantage coupled with execution .
Upend Profile: creation or market maker Game Changing / Radical Creation of new markets and products.	Treat as an internal venture capital portfolio .	ROI has highly volatile internal and external factors. Even if you do everything right (meaning execute well) – the world might not be ready for your new idea therefore, may not achieve any ROI.

Visible and Hidden GenAI Cost Factors

Use this diagram to identify visible and hidden costs of potential GenAI platform investments prior to making an investment decision.

Generative AI Cost Factors (Visible and Hidden) by Approach					
	Consume generative AI embedded in apps	Embed generative AI APIs in a custom app frame	Extend generative AI models via data retrieval	Extend generative AI models via fine-tuning	Build custom models from scratch
Visible	Per user software license	GenAI model API inference	Model costs (LLM API + embedding model)	Fixed base model tuning (tokens)	Compute costs for training
			Data storage (e.g., vector DB)	Data storage (e.g., vector DB or graph DB)	Data acquisition
			Data prep costs	Data prep costs	Data storage
				Custom model hosting	Data prep costs
					Parallel training software
Hidden	Software upgrade	Prompt tools	Retrieval boosting	Periodic tuning	Retraining
	Unassigned licenses	UX (re)design	UX design	UX design	UX design
	AI model evaluation, monitoring, safety testing and fairness tools				
	Application integration				
	Talent hiring and retention				
	User training				
	IaaS and operational costs (if self-hosting)				

Source: Gartner
810685_C

Focus on mitigating the key cost drivers — model size, model customization, prompt engineering and compute costs, where the models are hosted and how they are managed.
